EXHAUST PIPE EXTENSION
AND
EXHAUST PIPE FAIRING

Exhaust Pipe Extension

Texas Skyways, Inc. has the STC/PMA for an Exhaust Pipe Extension for many of the 1953 to 1986 Cessna Aircraft. This easily installed exhaust pipe extension will help keep the belly of your plane cleaner by channeling exhaust residues further away from the plane than the existing exhaust pipe. There is no performance lost or performance gain. The ceramic coated exhaust pipe is there for one reason; to minimize the time spent cleaning the belly.

Exhaust Pipe Fairing

This STC/PMA fairing fits around the exhaust pipe or the exhaust pipe extension giving a more pleasing appearance to the eye. However, the fairing is more than just pleasing to the eye; it blocks the air which normally enters through the exhaust hole in the cowling. Not only does it block the air entering the cowling, it creates a venture effect which draws more air out of the cowling and reducing CHTs.

If you are interested in either or both of these modifications feel free to give us a call and let us know what we can do for you. We also have a website available. Our web site address is www.txskyways.com. To request information you may telephone us at (830) 755-8989 or e-mail us at sales@txskyways.com. We want to help you make the best choice for your aircraft.
